

CITYCOINS

THE GTA RP MARKET REVOLUTION

— ABOUT THE IDEA

Why did we create **this project?**

We found an opportunity within the GTA 5 RP market, where we can take advantage of the GTA VI hype and the large population of players to popularize a new concept using a token that will serve to unite the Crypto market with the gaming market. Below, we show a financial example of the minimum values that a server makes on the market today.

R\$300K

Monthly Billing

R\$132K

Semiannual Billing

+500

Online players

1st Step: Creating a server, similar to the market, but different.

How to stand out maintaining the essence?

GAÚCHO RP

First server on the market with the theme of Rio Grande do Sul. Historical Monuments, Regional Police, Bank Banrisul among other ways to stand out in a market that 80% is represented by Rio de Janeiro, 15% São Paulo and 5% Minas Gerais and Paraná. It allows the player to change what type of person he is according to his choices that generate consequences for his actions.

HOW PROFITABILITY WORKS

The popular culture of the market is to purchase VIP passes, Mansions, Cars, Helicopters, change the ID (identity), buy ID 1 – 500 for values starting from \$10 to \$590.00 depending on the rarity of the item, ID or quantity of benefits that VIP benefits the player. For this reason, the server has a monthly, quarterly and semi-annual profitability depending on how long the season lasts.

HOW MARKETING WORKS

An investment within the fiveM platform is necessary to attract players' attention, with the purchase of votes being optional to reach a higher level in the rank and have your server published in the top 3 positions on the platform. 5,000 votes are needed to be in the top 10 servers in the country at a cost of \$300/h and the top 50 costs \$160.00/h.

2nd Step: Creating Cryptocurrency and promoting resources

Making the token stable

When the player purchases a product in the store, automatically when money enters our account through the paid market API it is reversed into CityCoins, injecting liquidity and providing stability for the token according to monthly and quarterly flows. Our goal is to gradually increase its value and attract market attention and trade the token on large exchanges.

Project logic

Creating a Loop

AUTOMATED PURCHASE

Whenever a product is purchased, it is automatically delivered to the player's account

CONVERSION AUTOMATED

All purchases are injected into the token's liquidity, solidifying the crypto and generating healthy growth

PERFORMANCE AND STABILIZING

The injection of liquidity into the token generates gradual stability and increases its market value, attracting new investors

3rd Step: Making business scalable

Did it work?

Now just replicate!

With a validated business model, now we just have to knock on the doors of other servers and show our numbers and results, there is no better social proof than results to show. Think for just a moment, if today it is already extremely profitable to set up a server, imagine transforming a static passive income into a progressive and scalable income, as each server that implements this system will receive the income from their server in token, and its value will increase exponentially due to this new source of income.

Learn more about the teams working on the project

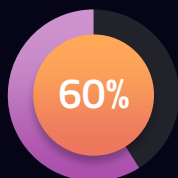

Two teams, **one goal.**

We set up two technical teams to execute this project. They are working simultaneously to meet two deadlines: Pre-sale of the token to raise funds and development of an exclusive server, but with elements that the market already knows.

TEAM SERVER **FIVEM**

Composed of: 3 investors, 1 Dev, and 1 Influencer.

TEAM **CRYPTO**

Composed of: 2 Dev, 1 Investor.
